Ayush Vora

Toronto, ON | ayushtvora@gmail.com | 647-573-4479 | linkedin.com/in/ayushtvora | github.com/ayushtvora

Skills

- **Languages:** Python, Java, JavaScript, TypeScript, C, C++, C#, PHP, Go, Rust, Swift, HTML, CSS, R, VBA, Bash
- **Database:** SQL, No-SQL, MySQL, PostgreSQL, Oracle, SQLite, MongoDB, Firebase, Databricks, Tableau, Spark, Salesforce, PowerBI
- **Frameworks:** Node.js, Django, FastAPI, ASP.NET Core, Flask, React, React Native, Angular, SignalR, Swing, PyTorch, TensorFlow
- **Tools:** Git, GitHub, Docker, Azure, AWS, GCP, Android Studio, XCode, Jupyter, Raspberry Pi, Arduino, Unity, Excel, Windows, Linux

Experience

Systems Administrator Co-op, BC Centre for Ability — Jan 2025 – Jan 2026

- Automated archival and optimization of **Salesforce** databases with **Python** and **Selenium**, freeing **520 GB** of storage across 3 databases.
- Mass-deployed **MS Office 365** to **100+ computers** via automation scripts, cutting setup time by **85%**, and coordinated client scheduling through **OneDesk** and **Outlook** alongside live feature demonstrations.
- Onboarded **40+ staff** across **6 departments**, including setting up accounts in **AD**, managing **SharePoint** and Shared **OneDrive** permissions, and deploying Windows laptops with standardized imaging, **Fortinet FortiClient** VPN access, and asset tracking.
- Administered IT infrastructure across **Active Directory**, **Entra ID**, **Intune**, **Azure**, **Hyper-V**, and managed **4 Windows servers**, resolving **25+ tickets weekly** and supporting day-to-day systems operations.

Toolset Software Developer / Data Analyst Co-op, ATS Corporation — Jan 2024 – Apr 2024

- Implemented and iteratively improved MS Excel Macros using **VBA** to automate tasks and generate data visuals, saving **150+ hours** of repetitive work annually.
- Built an automated data pipeline into a **Databricks** SQL server, improving **KPI dashboard** generation efficiency and enabling **ML-based anomaly and data quality detection**.
- Fixed **12 bugs** present in the Java-based report-generator **METRIX**, improving app efficiency and increasing productivity by **33%**.

Teaching Assistant, University of British Columbia — Sep 2024 – May 2026

- Conducted weekly labs and tutorials for **150+ students** across introductory, intermediate, and upper-year algorithms courses.
- Hosted office hours to provide individualized support, clarifying complex concepts and debugging student code.
- Graded assignments and exams with detailed feedback to help students identify and address gaps in understanding.
- Received a **99.5% favourable rating** from students for clarity of explanations and approachability.

IT Technician, Rootnet Solutions — May 2022 – Sep 2022

- Deployed **200+ laptops and desktops** successfully to **5 Air Canada offices**, including **YYZ International Airport**.
- Served as the primary point of contact for **Air Canada YYZ Branch** for technology installations, relocation, expansions, and modifications.
- Diagnosed and repaired hardware issues and tracked device inventory and serial numbers across all deployed units.

Projects

Server Dashboard - ASP.NET Core (.NET 8), Angular, SignalR, PostgreSQL, Docker — GitHub: server-dashboard

- Built a self-hosted, real-time monitoring dashboard for **Ubuntu** servers, displaying uptime, resource usage, and **Docker** container health.
- Used **SignalR** to stream live CPU, RAM, GPU (via nvidia-smi), and container metrics from an **ASP.NET Core** backend to **Angular** frontend.
- Deployed with **Docker Compose** and an **Nginx** reverse proxy, gracefully handling servers without a GPU or Docker installed.
- Wrote a **test suite** covering both the frontend and backend to verify dashboard reliability and API correctness.

Wakey Wakey - React, React Native, Express, Node.js, MongoDB — GitHub: wakey-wakey

- Developing a full-stack alarm clock app with routine-based alarm scheduling and snooze functionality.
- Building alarm-dismiss challenges, including a **QR-code scanning challenge** requiring users to physically locate and scan a code, plus incentive messages to encourage waking up.

SpotiPaw - C (Arduino), Python (Flask), Spotify API. — GitHub: spoti-paw

- Developed a motion-controlled media player for **Spotify**, controlled by hand gestures and motion.
- Created with an ultrasound sensor connected to an **Arduino**, linked to a **Flask** server managing the API.

SNASA - PHP, SQL (Oracle), HTML, JS — GitHub: SNASA

- Created an accessible website where the user can view different celestial objects, such as galaxies, planets, etc.
- Used **SQL** to create different queries, including adding, removing, and updating current objects, and different views of current systems.

Education

University of British Columbia, Bachelor of Science, Computer Science and Statistics — Sep 2021 – May 2026

- **Courses:** Databases, Machine Learning, Operating Systems, Networking, Computer Hardware, Algorithms, Statistical Inference
