Toronto, ON | ayushtvora@gmail.com | 647-573-4479 | linkedin.com/in/ayushtvora | github.com/ayushtvora

Skills

- **Languages:** JavaScript, TypeScript, Java, Python, C#, C++, Rust, Swift, SQL, Kotlin, Go, C, Bash, PowerShell, PHP, R, VBA, HTML, CSS
- **Database:** PostgreSQL, MongoDB, Elasticsearch, Redis, Databricks, Snowflake, MySQL, Tableau, SQLite, Spark, Salesforce, PowerBI
- **Frameworks:** Node.js, Next.js, Vercel AI SDK, FastAPI, ASP.NET Core, React, React Native, Angular, Playwright, PyTorch, TensorFlow
- **Tools:** Git, GitHub Actions, Docker, Cloudflare Workers, Claude API, MCP, Azure, AWS, GCP, XCode, Jupyter, Raspberry Pi, Linux

Experience

Systems Administrator Co-op, BC Centre for Ability — Jan 2025 – Jan 2026

- Automated archival and optimization of **Salesforce** databases with **Python** and **Selenium**, freeing **520 GB** of storage across 3 databases.
- Mass-deployed **MS Office 365** to **100+ computers** via automation scripts, cutting setup time by **85%**, and coordinated client scheduling through **OneDesk** and **Outlook** alongside live feature demonstrations.
- Onboarded **40+ staff** across **6 departments**, including setting up accounts in **AD**, managing **SharePoint** and Shared **OneDrive** permissions, and deploying Windows laptops with standardized imaging, **Fortinet FortiClient** VPN access, and asset tracking.
- Administered IT infrastructure across **Active Directory**, **Entra ID**, **Intune**, **Azure**, **Hyper-V**, and managed **4 Windows servers**, resolving **25+ tickets weekly** and supporting day-to-day systems operations.

Toolset Software Developer / Data Analyst Co-op, ATS Corporation — Jan 2024 – Apr 2024

- Implemented and iteratively improved MS Excel Macros using **VBA** to automate tasks and generate data visuals, saving **150+ hours** of repetitive work annually.
- Built an automated data pipeline into a **Databricks** SQL server, improving **KPI dashboard** generation efficiency and enabling **ML-based anomaly and data quality detection**.
- Fixed **12 bugs** present in the Java-based report-generator **METRIX**, improving app efficiency and increasing productivity by **33%**.

Teaching Assistant, University of British Columbia — Sep 2024 – May 2026

- Conducted weekly labs and tutorials for **150+ students** across introductory, intermediate, and upper-year algorithms courses.
- Received a **99.5% favourable rating** from students for clarity of explanations and approachability.

IT Technician, Rootnet Solutions — May 2022 – Sep 2022

- Deployed **200+ laptops and desktops** successfully to **5 Air Canada offices**, including **YYZ International Airport**.
- Served as the primary point of contact for **Air Canada YYZ Branch** for technology installations, relocation, expansions, and modifications.

Projects

Job Board - Next.js, TypeScript, Python, Playwright, PostgreSQL, Prisma, Docker — GitHub: job-board-site

- Built a self-hosted job tracker that scrapes **159 company career sites** daily with **Python**, **Playwright**, and **BeautifulSoup**, serving listings from **PostgreSQL** through a **Next.js** app with filters and "applied" tracking.
- Designed **idempotent upserts** on deterministic job IDs, keeping applied history after listings close and flagging failed scrapes.
- Wrote shared scrapers for ATS platforms like **Workday** and **Greenhouse**, run in parallel with **per-host rate limiting**.
- Deployed with **Docker Compose** via **GitHub Actions** with **Prisma** migrations, a **WireGuard** VPN for scraping, and **Cloudflare Access**.

Life Organizer API - ASP.NET Core (.NET 10), Claude API, Google Calendar API, Docker — GitHub: life-organizer-api

- Built an API behind an iPhone Shortcut that turns notes like "meeting 4-5pm wed" into **Google Calendar** events or **Todoist** tasks.
- Designed a hybrid parser: deterministic date rules first, with an **LLM** fallback (**Claude API**, structured JSON) when confidence is low.
- Wrote **45+ xUnit tests** and a **GitHub Actions** CI/CD pipeline deploying a **Docker** image to a home server behind **Cloudflare Tunnel**.

Wakey Wakey - React Native (Expo), TypeScript, Swift, Cloudflare Workers — GitHub: wakey-wakey

- Built an iOS alarm that only stops after a chain of challenges (**math**, **QR/barcode scan**, **steps**), using **AlarmKit** via a custom **Swift** module.
- Wrote a **Cloudflare Worker** watchdog with **Durable Objects** that posts a **Discord** "punishment" on time, even if the phone is off.
- Shared alarm and streak logic in a **TypeScript** package with **40+ Vitest tests**; **GitHub Actions** builds the iOS app on macOS runners.

Server Dashboard - ASP.NET Core (.NET 8), Angular, SignalR, PostgreSQL, Docker — GitHub: server-dashboard

- Built a real-time dashboard for **Ubuntu** servers, streaming CPU, RAM, GPU, and **Docker** metrics to **Angular** via **SignalR**.
- Collected metrics from **/proc**, **nvidia-smi**, and the **Docker socket**, degrading gracefully when a GPU or Docker isn't present.
- Deployed with **Docker Compose** and an **Nginx** reverse proxy, with a **test suite** covering both frontend and backend.

Education

University of British Columbia, Bachelor of Science, Computer Science and Statistics — Sep 2021 – May 2026

- **Courses:** Databases, Machine Learning, Operating Systems, Networking, Computer Hardware, Algorithms, Statistical Inference
